Installing Migration Manager on a new Machine

If Migration Manager has already been installed and configured by Migration Manager's installation team and you now wish to install Migration Manager on additional machines, you can do so by running the Migration Manager Installer.

Due to a limitation with Windows Mapped Drives, the installer cannot be used for clients who access the Migration Manager (or LEAPMM) folder via a Mapped Drive. If your site uses Mapped Drives to access the Migration Manager folder, please log a Support Call and our Installation Team will be happy to assist.

The process is done in two parts:

- 1. Creating the Installer using an existing Migration Manager installation.
- 2. Running the Installer from the new Machine.

1. Creating the Installer

If you have not yet done so, use **the Install on another computer** function to create a new Install Program. Once this has been created, you can use this installer to install Migration Manager on as many machines as you like.

Create the Installer

From an existing Machine, select **Help**, then **Install on another computer**.

File	Schedules	Tools	Help	BETA Feedback	
0	1		Log	g a Support Call Online	
			Ab	out MM 📕 🛄 🛍	- UV A
New	ρen	(Bo	ok a Training Session ^N s Tasks Accounts	Rep
			Ch	eck sites accessible	
			Do	wnload Remote Connection Software	
			End	d User Agreement	
			Ins	tall on another computer	
			Mo	onitor Background Tasks	
			On	line Update	
	-		Re	cord eVisa Session	
			Ser	nd Memory Usage Report	
			Sys	stem Readiness Report	
			Us	er Manual	

Migration Manager will build an installer, then place the installer executable in the '**Installation**' sub-folder of your Migration Manager folder storage. For example:

MigrationManager\Installation\MigrationManagerClientCloudReinstall.exe.

When this task is complete, a message will appear showing the location. Click **OK** to close the window.

The installer will be built with your current version of Migration Manager packaged. You can now use this installer as many times as you like, however if it has been some time since you have used the installer, you may wish to create it again, so it is built with the latest/your current version.

2. Running the installer

You can now run the installer from the new machine.

Before running the installer, your Migration Manager (or LEAPMM) folder must be available on the new machine. Therefore:

 If your Migration Manager (or LEAPMM) folder resides in File Cloud Storage (Dropbox, OneDrive, Google Drive etc), then this cloud software **must be** <u>installed (and synced)</u> on the new machine <u>before you begin the next step</u>.

Note: If your Migration Manager file storage resides in the Cloud, you may need to wait a short time for the install file to sync to the new machine.

Note: There are currently some installation issues that relate to using Google File Stream. If you encounter any issues, please <u>contact support</u> and we will be happy to assist with installation.

2.1. Run the installer

On the new machine, go to the 'Installation' sub-folder in your Migration Manager (or LEAPMM) folder, run the **MigrationManagerClientCloudReinstall.exe**.

E:\MigrationManager\Installation			
Name	Date modified	Туре	Size
Ø MigrationManagerClientCloudReinstall.exe	2/01/2020 10:40 AM	Application	74,370 KB
13 MMSetup.msi	16/07/2013 6:22 PM	Windows Installer	17,804 KB

2.2. Agree

Click "I Agree", then click Next.

2.3. System Check

The installer will check to ensure your system is ready and that all the required companion programs are installed. If it fails on any of these points, correct the issue (example: install a required program), then click **Refresh** to re-run the check. Once all components pass, you can click **Next**.

2.4. Select the location of your MigrationManager (or LEAPMM) folder

If the installer finds installed Cloud software such as Dropbox, it will show these options and give you a default location. If this is incorrect, you **MUST** click the **Browse** button to browse to the correct location.

Migration Manager _ ×

If the installer does not find your Cloud Storage, then select the 'Storage Location Option' as **Other** and Browse to your **Migration Manager** (or **LEAPMM** folder).

2.5. Then click Install

The Installer will now run.

2.6. Close

When complete, click **Close**. You can also leave the option ticked for **Launch Migration Manager** and Migration Manager will automatically start when the installer closes. The Installer will also create a shortcut on the new machine's Desktop for the Migration Manager application.
